SWORD ART ONLINE

A conversion for D&D 5e: <<V1.0>>

Created by
Cableguy 5e Content

Note from the Author

This conversion for Dungeon and Dragons Fifth Edition is used as both replacement and supplementary tool in order to create a game or campaign within the world of Sword Art Online (SAO). The conversion assumes a general knowledge of the SAO universe and the use of Aincrad. This conversion also assumes that the DM will create original content for their own world such as weapons and monsters. As with everything tabletop, use this conversion as a GUIDE. Nothing is set in stone and what your DM says is law. Alterations to rules to adapt to your group or your campaign idea is welcomed.

I would personally like to thank everyone that has helped me test the content during my closed beta tests as well as the players who partook in the game that I ran. It was from this experience I was able to successfully test the content as written. It is from that game and tests that have lead me to finish this product in its most basic form. With that said I also look forward to creating more content and have been asked to even expand on this and to adapt this rule set and the existing D&D 5E set to accommodate other aspects of SAO such as ALFheim Online (ALO) and Gun Gale Online (GGO), and with the latest season perhaps even Alicinization in the distant future. I am however one man and while interested in undertaking these challenges it will take some time. The content within this conversion is 100% free and will always be as such. I hope you enjoy the conversion as much as I enjoyed running it for my players. With that said, LINK START...

Table of Contents

Proficiencies	3	Consumable Items	17
Starting Stats	4	Known Floors	18
Death Game	4	Getting Started	19
Teamwork	5	Insight	19
Classes	6	Cooking	20
Beast Tamer	7	Sword Skills	21

Material Gathering	11	One Handed Axe Sword Skills	25
Upgrading Weapons and Armor	12	Two Handed Battle Axe Sword Skills	27
Weapon & Armor Rarities/Bonuses	13	Rapier Sword Skills	29
Cursor Colors and Player Killers	14	Dagger Sword Skills	31
Guilds	15	Katana Sword Skills	33
Dungeons	15	One Handed Mace/Hammer Sword Skills	35
Shields	16	Two Handed Sword Skills	37
Status Effects	16	Spear Sword Skills	39

Rule Changes

Proficiencies

The normal D&D 5e rule set calls for a gradual proficiency increase based on level. The SAO conversion removes proficiency entirely and instead relies entirely on the modifiers from characters stats. This is arguably the biggest change within this conversion as it affects stats, character development, attacking, and normally spells (which are not within the SAO world).

Instead of proficiencies and proficiency bonuses you instead get 3 skill points are added every level increase. These skill points can be added to any of the skills normally found within D&D 5e as well as tool or trade proficiencies like cooking, blacksmithing, etc.

The intention for this adjustment is to allow full customization and the feeling of being able to invest time and energy into what you need or what you would like to do. Another strong reason for this is to immerse the player's even more so. Within SAO weapons usually are upgradeable to +15 weapons. Given what that means in relation to D&D that is very high. So this conversion plans for DM's to make weapons upgradeable to +10 in addition to taking stats into account.

Starting Stats

Life in SAO isn't easy even more so at lower levels. In this world getting stronger allows you to carve your own destiny. SAO is still a Massive Multiplayer Online Role Playing Game (MMORPG) and as such comes with rules designed into the game itself. As such all player stats are set to "10" when beginning a game at level 1. This also alters the way stats are increased.

Regardless of a class's level chart, each class gets +3 to stats of their choice every 2 levels. It is because of this we ignore the Ability Score Increases listed within a D&D Class. In addition feats cannot be obtained by trading an ASI increase they are most often found as quest rewards within the game itself.

Death Game

Although this can be changed as per your DM or AK (Akihiko Kayaba) SAO is a death game. When a player's avatar hits 0 Health Points (HP) they die. There are no death saving throws and no means of resurrection. It is because of this players are encouraged to stick to teamwork, caution, and preparation. It is because of this a few features are added to this conversion to be able to help.

Teamwork

Teamwork is crucial for the reasons listed above. Within SAO players learn to rely on the player next to them in order to avoid death. It is because of this we have added actions and bonus actions that are used within SAO as Outside System Skills (OSS).

<<Switch>>: As a bonus action you give another player within 30ft advantage on their next attack. It can be used as an action which gives the above effect and gives a target disadvantage on attacks made against you for the turn.

<<Taunt>>: As a bonus action following a <<Switch>> the player that was switched in can gain the attention of the enemy when a successful attack is made against it after using <<Taunt>>. The following attacks the enemy makes are made at that target unless an effect says otherwise. This effect lasts for 1 minute, until the player who taunted dies, or an effect ends the taunt.

<<Help>>: As a bonus action you can use the help action (PHB) on any ally within 30ft. This does NOT apply to attacks and only on roll's where the DM/AK thinks that it would be useable such as dragging and carrying a friend out of harm's way etc.

<<Drive>>: (Located in Sword Skills section).

In addition to the above it takes a bonus action to use a <<Healing Crystal>> or <<Antidote Crystal>> on yourself. It takes an action however to do it on someone other than yourself.

Classes

A player's class is determined by which weapon they decide to specialize in. When creating a character a player can choose any weapon from the below listed weapons. Each weapon has two separate classes or archetypes that can drastically alter the play style for that character. Roles can be deduced or even created based on the options available:

One Handed Sword & Shield: (Longsword, Shortsword, Scimitar)

Fighter-Battle Master or Fighter- Cavalier¹

One Handed Axe: (Handaxe,Battleaxe)

Fighter- Brute² or Barbarian- Berserker

Two Handed Battle Axe: (Greataxe)

Barbarian-Totem Warrior or Barbarian- Berserker

Rapier:

Fighter- Champion or Rogue- Swashbuckler

Dagger:

Rogue- Assassin or Rogue- Scout/Beast Tamer³

Katana⁴:

Fighter- Samurai or Fighter- Champion

One Handed Mace/Hammer: (Mace, Club, Greatclub, Warhammer, Flail, Morningstar)

Fighter- Battle Master or Fighter- Brute

Two Handed Sword: (Greatsword)

Fighter- Brute or Barbarian- Totem Warrior

Spear: (Spear, Pike)

Fighter- Battlemaster or Fighter- Samura

¹Cavaliers in D&D use mounts. In SAO there are no mounts. When looking at the Cavalier remove all instances of mounts and remove "Born to Saddle". ²Fighter:Brute is found in D&D 5e Unearthed Arcana. <https://media.wizards.com/2018/dnd/downloads/UA-3Subclasses0108.pdf>

³Ranger Beast Master is very different from the original D&D book. Changes will be listed in another section of this conversion. ⁴A katana is very similar to a longsword. The only difference is that a Katana adds "Finesse" as well to the stats of a longsword. It is still a versatile weapon.

Beast Tamer

Easily the most altered class and also the most crucial to any party in SAO. To those familiar with the world of SAO this is the same class as Silica. This class involves taming a neutral monster in SAO and training that monster to aid the user and the party. This essentially adds another member to the party that is under the control of the tamer. They are the main support class as they train their beasts to heal and give aid whenever possible. However, just like players these monsters are capable of dying if precaution is not taken.

Just for the purpose of the Beast Tamer the Tamed Beast is able to cast “spells”. Unlike the rest of SAO the best tamer’s trained pet is able to utilize healing magic, for the purpose of keeping track of how many spells and what spells we use the following guidelines.

The Tamed Beast uses the Multiclass Spellcaster chart (PHB.165). The Beast’s level is the same as the tamers, aka if the Beast Tamer’s level is 5 the Beast is also level 5. The spells gained by the beast are automatically learned and are prepared upon reaching the level necessary to unlock that level of a spell. Charisma should be used as the modifier for the spells listed below.

Level 1: Healing Word, Cure Wounds

Level 2: Lesser Restoration, Prayer of Healing, Aid

Level 3: Mass Healing Word, Aura of Vitality

Level 4: Freedom of Movement, Aura of Purity

Level 5: Greater Restoration, Mass Cure Wounds

Level 6: Heal

Level 7: Regenerate

Level 8: Holy Aura

Level 9: Power Word Heal, Mass Heal

The Tamed Beast takes its turn in conjunction with the Tamer's. It costs an Action for the Tamer to utilize their beast to use a spell. However, ordering their beast to do anything else does not use any of the Tamer's actions. The neutral beasts that are tamed are generally not able to conduct combat very well and it is advised to avoid putting them in harm's way. If a beast dies the Tamer must either find a way to revive it or tame another neutral monster. It isn't always easy to find neutral monsters at your current level.

The Tamer Themselves are also very capable at fighting with or without their beast, after all they had to survive long enough to tame one. The Beast Tamer utilizes the Rogue- Scout class and archetype. This means that your essential and basic class is as a Rogue- Scout but in the process learned to tame a beast. This allows you to play multiple roles if needed and still assist with damage and use your Beast whenever you deem appropriate.

It is recommended to use the Faerie Dragon (MM.133) as a template for the first beast. However, remove the following features: Superior Invisibility, Magic Resistance, Innate spell casting, and Euphoria breath. This creature represents a <<Feathered Little Dragon>>

Armor and Armor Class(AC)

Armor in SAO is mostly aesthetic the bonuses to specific armor are what makes armor unique. As such one should assume there are no prerequisites to wearing different armor types. However, there are no benefits from wearing Plate as opposed to Leather. The biggest difference is as your level grows and more items and rarities are discovered you may come across armor that is specifically designed for one play style over another. For example you might find a nice leather armor that gives +2 to Dex and +5 to stealth as well as a potential other bonus in contrast one might find a nice plate armor that gives +2 to Con and +3 to athletics and gives a bonus of some kind.

The most important thing to factor in with Armor is how upgradeable it is. As with weapons, armor is upgradeable and at its base of +0 it does not give an AC bonus. The best armor in the game might also require a prerequisite in stats for the purpose of balancing. There are also some armors in game that will subtract from other stats. A very nice plate armor might reduce your DEX and require a certain amount of STR. It is assumed in this conversion that the interested DM/AK will create custom armor to suit their game and story. In SAO armor upgrades are not as well known as weapons so for balancing reasons it is recommended that Armor's max upgrade be a +5.

AC Without +1 and above armor is calculated as follows:

10+DEX Modifier

AC with armor is calculated as follows:

10+DEX Modifier+Armor Level (+1,+2,+3,etc.)

Currency/Encumbrance/Food/Materials

Currency within SAO is called Cor and for the purposes of this conversion Cor is the equivalent to Gold Pieces (GP). As there is only one form of currency in SAO any currency obtained as per loot tables in the Dungeon Master Guide should be converted to Cor with a minimum reward of 20 Cor whenever one would be obtained. Cor has no weight and is stored in the account of the user. It is also important to note that for SAO there is no encumbrance system. Food is still a relative necessity within SAO. Realistically those trapped in the game are being fed in hospitals but the game itself triggers whenever you are hungry causing your avatar in game to feel hungry. This feeling of hunger does not subside until you eat within the game. This was initially added to further immersion within SAO as well as let players know when their bodies needed substance outside the game and eating within the game was essentially a ‘snooze’ button of sorts. Price examples for the below are from SAO materials. Prices can get very high and likely should be scaled based on the floors. Although it is possible to just use the gold system in place within D&D 5e.

List of Common things Priced in SAO based on anime/novels

Bread (Dry, cheap)	1 Cor
Panini	12 Cor
Inn Room on 1 st Floor	50 Cor (50Cor x Floor Level)
Home on 35 th Floor	1,000,000 Cor
Asuna’s Home	4,000,000 Cor
Log House on 22 nd Floor	5,000,000 Cor
Knights of the Blood Guild HQ	1,000,000,000 Cor

Material Trade Value

Material	Cost	Sell
Common (C)	100 Cor	50 Cor
Uncommon (B)	500 Cor	250 Cor
Rare (A)	10,000 Cor	5,000 Cor
Legendary (S)	100,000 Cor	50,000 Cor

Material Gathering

Material gathering is crucial to success within SAO, without acquiring mats of all levels of rarity it is near impossible to stay strong. While it is possible to purchase or trade for materials the quickest route is to find them. Some materials are rewards for quests but the bulk of materials are gained whenever you defeat a monster. In order to keep the flow of a game after an encounter you are able to loot a monster. A successful <<Investigation>> check will reveal any items that can be obtained that are NOT materials, such as Cor or items. A <<Survival>> check must be made to search for materials. When you make a <<Survival>> check you immediately roll 1d100 and add the result of your previous check to the result of the d100 roll and the Challenge Rating (CR) of the monster you killed (minimum of 1). This means farming stronger enemies can reward you with better materials. The quality of the material plays a big part and it is recommended that you follow the below chart: (Example: You roll a 15 total on <<Survival>> check and a 20 on the d100 but you defeated a CR 9 monster. Your result of the d100 roll is 20+15+9 or 44 resulting in a common material being found)

Material Chart

Rarity	d100
None	1-20
Common (C)	21-60
Uncommon (B)	61-89
Rare(A)	90-119
Legendary (S)	120+

Upgrading Weapons and Armor

Upgrading weapons and armor is a huge part of advancement as all weapons and armor found start at their most basic level and not upgraded. Upgrading normally involves an increase to hit and damage for weapons and an increase in AC for armor, although upgrading can also alter other things like bonuses. Acquiring the materials and Cor necessary to upgrade is a crucial part of the game and the conversion. Upgrades also have a chance of failure it is recommended to try and find skilled blacksmiths within the game to reduce the chance of failures occurring. When an upgrade fails the Cor is lost but the blacksmith can attempt to save the materials with a successful <<Smith>> tool check with the same success rate as the attempted upgrade. When a Smith be it NPC or another player rolls to upgrade an item they add the result of a <<Smith>> check to their d100 roll. The below charts are what is recommended for upgrades: (Example: A blacksmith rolls a 60 on the d100 but rolls a 20 on their <<Smith>> check leaving the final result as an 80). If more than one player wishes to be a blacksmith I recommend breaking smithing down into two categories; one for weapons, and the other for armor.

Armor Upgrade Chart

<u>Armor</u>	<u>Cost</u>	<u>Materials</u>	<u>Chance of Success</u>
+1	100 Cor	5xC	100
+2	1,000 Cor	5xC,3xB	80
+3	10,000 Cor	5xB, 2xA	60
+4	50,000 Cor	5x A	40
+5	100,000 Cor	5xA,1xS	20

Weapon Upgrade Chart

Weapon	Cost	Materials	Chance of Success
+1	100 Cor	5xC	100
+2	250 Cor	5xC, 1xB	90
+3	1,000 Cor	5xC, 3xB	80
+4	2,500 Cor	5xC, 3xB	70
+5	5,000 Cor	5xB, 2xA	60
+6	10,000 Cor	5xB, 2xA	50
+7	50,000 Cor	5x A	40
+8	100,000 Cor	5x A	30
+9	250,000 Cor	5xA,1xS	20
+10	500,000 Cor	5xA,1xS	10

Weapon/Armor Rarities/Bonuses

A weapon's rarity is what determines how many bonuses a piece of armor or a weapon might have. At lower levels it is hard to find very rare items and even the ones you do find might not be as powerful as other weapons/armor later on. Each bonus level takes up a tier that determines what kind of bonus it could have. The number of bonuses an item determine how many tiers it has (max is 3). Each tier has a different effect that are never the same as the previous tier. The third tier can sometimes also have what is called a "Set Bonus" and only applies if you have a weapon and armor with the same "Set Bonus" name. DM's/AK's should also remember that it is okay to hand out stronger weapons/items early as a lot of weapons can also have effects that lower other attributes but bolster others to compensate for the items power. The following tables give an idea of how to go about weapon rarity.

Rarity	Number of Bonuses
Common	0
Uncommon	1
Rare	2
Legendary	3

Examples of bonuses: Expanded critical range, increase to primary attributes, increase to stats, increase to health or AC, Etc.

Cursor Colors and Player Killers

The world of Aincrad and Sword Art Online can be a dangerous place. In the death game there are a number of players who see this as an opportunity to get away with what they normally couldn't. Player killers are players who knowingly seek out and kill other players either for fun or to steal valuable items. These player killers are known as "Red Players", this name comes from the color of their cursor above their head. A green player is a fellow player that is in good stature and a red player is a player killer. A player killer is not allowed in local towns and if they come close to towns are attacked by the overwhelmingly powerful NPC guards.

Cursor Color	Meaning
Green	Good Player or NPC. An NPC will be labeled as such
Orange	Player Killers
Yellow	Inactive Monster (Neutral), Some NPC's, and Pets
Red	Active Monsters. A yellow outline around signifies that the monster is needed for a quest. Different shades explain difficulty.

Active Monster Indicator	Meaning
Light Pink	Very weak. No EXP reward.
Pure Red	Equal Level to player
Purple/Magenta	Higher level than player
Dark Crimson	Overwhelming difference in level. Cannot be beaten
Black	Monsters even more powerful than Dark Crimson

Guilds

A group of players can create a guild. A guild in Sword Art Online contains a number of players with similar goals, ideals, and even personalities. There are a large number of guilds ranging from crafts guilds to content clearing guilds. Each guild specifies its identity and established a home base of operations using Cor. Although an Inn can be used as a base of operations at the start the more popular guilds establish their own homestead. A player can only be a part of one guild at a time. It is common for guilds to also set a tax rate so that whenever Cor is earned by individual players a certain amount goes into a guild fund which is maintained by the guild leader.

Dungeons

Dungeons are a huge part of SAO as they are one of the quickest ways of leveling up, getting money and materials, and finding the boss room to an individual floor. However they are also extremely risky and contain a lot of unknown enemies and traps that could end a life rather quickly if unprepared. At the end of a dungeon there is usually a single boss enemy that is stronger than the others but less dangerous than a floor boss. If killed these bosses usually drop a few good pieces of loot in addition to any mats and Cor found. The following are examples of simple loot tables:

Any Die	Loot Drop
Even	Weapon
Odd	Armor

D100+PC Level	Rarity Result
1-49	Common (No Bonuses)
50-79	Uncommon (x1 Bonus)
80-94	Rare (x2 Bonus)
95-100+	Legendary (x3 Bonus)

D10	Result: Weapon for (Class)
1	One Handed Sword & Shield
2	One Handed Axe
3	Two Handed Axe
4	Rapier
5	Dagger
6	Katana
7	One Handed Mace/Hammer
8	Two Handed Sword
9	Spear
10	Roll again! Add +1 to the result

Shields

Shields are a very necessary item for the One Handed Sword & Shield class. Without one all of their attack bonuses and damage are halved. This is because a shield in SAO is treated as an offhand and contributes to half of your weapon stats that any other class would have. It is because of this that shields are treated as weapons and not armor as they do not provide a boost at AC by themselves. Without having a shield you are restricted on the number of sword skills you can perform within your class and role. Lastly, the One Handed Sword & Shield class is the only class capable of having an increase to AC on their weapon should they be lucky to find out, the boost ranges from a +1 to a +2 but are considered rare.

Status Effects

There are minor adjustments and even a new status effect within the world of SAO they are listed below:

<<Poison>>: While poisoned the person or enemy afflicted will take poison damage every round or 6 seconds for 1 minute or until cured. The damage is calculated by whichever damage die is used for the initial poison damage but only 1 damage die. So if a poison effect initially deal 2d10 poison. Every round you will take 1d10. Curing Poison using an **<<Antidote Crystal>>** becomes super important!

<<Burning>>: You or an enemy are ignited in flames and are suffering burning damage. The same rules apply from **<<Poison>>** the key difference is that a burning effect will do damage to your MAX HEALTH and not your current health. This limits your ability to heal and can kill you just as potently as **<<Poison>>** damage so be sure to use an **<<Antidote Crystal>>** to cure!

Consumable Items

This conversion uses the same healing potions from 5e. However the differences are the name changes. Though similar to 5e prices it is recommended to increase or cap the number of crystals a player can purchase (unlike actual video games).

Item	Effect	Cost
Healing Crystal (Red)	Heal 2d4+2	50 Cor
Greater Healing Crystal (Red)	Heal 4d4+4	150 Cor
Superior Healing Crystal (Red)	Heal 8d4+8	500 Cor
Supreme Healing Crystal (Red)	Heal 10d4+20	1500 Cor
Antidote Crystal (Green)	Cure a Status Effect	100 Cor
Teleport Crystal (Blue)	Transport User to a City Gate	500 Cor
Corridor Crystal (Indigo)	Transport to a Place the User has Marked	750 Cor
Message Record Crystal (Teal when inactive/Light Green when playing)	Records someone's voice. Works on yourself, Players, and NPC's.	200 Cor
Record Crystal (Pink)	Takes in game screenshots that can be printed later.	100 Cor

Known Floors

While it is entirely up to the DM/AK how you want to establish each floor there is a lot of information known for various floors and a lot of others floors that lack any information. You can completely create all one hundred floors from scratch if you so choose but if you want to stick to the original SAO as much as possible I put together a list of known floors. I will only be giving a brief description if a floor has one. Some floors only have a name of a location on the floor such as a city or the name of a castle.

Floor	Description	Floor	Description
<u>1</u>	Town of Beginnings, Monument of Life, Black Iron Palace, Tolbana, Horunka Village, Medai Village	<u>39</u>	Nolfret, Nolfret Teleport Gate Plaza
<u>2</u>	Urbus, Marome Village, Taran Village	<u>40</u>	Jaileum, Jaileum Teleport Gate Plaza
<u>3</u>	Forest of Wavering Mists, Dessel, Zumfut Teleport Gate Plaza	<u>46</u>	Ant Hill
<u>4</u>	Rovia, Rovia Teleport Gate Plaza, Bear Forest, Yofel Castle, Usco Village, Caldera Lake	<u>47</u>	Floria, Floria Gate Plaza, Hill of Memories, Forest of Giant Flowers
<u>5</u>	Karluin, Karluin Teleport Gate Plaza, Mananarena, Shiyaya	<u>48</u>	Lindarth, Lindarth Teleport Gate Plaza
<u>7</u>	Monster Arena	<u>49</u>	Myujen, Myujen Teleport Gate Plaza
<u>8</u>	Frieven Village, Frieven Teleport Gate Plaza	<u>50</u>	Algade, Algade Teleport Plaza
<u>9</u>	Dark Elf Queen's Castle	<u>55</u>	Granzam, Granzam Teleport Plaza, West Mountain
<u>10</u>	Thousand Snake Castle	<u>56</u>	Pani
<u>11</u>	Taft, Taft Teleport Gate	<u>57</u>	Marten, Marten Teleport Gate Plaza
<u>19</u>	Ralberg, Ralberg Teleport Gate, Hill of the Cross	<u>59</u>	Danac, Danac Teleport Gate Plaza
<u>20</u>	Sunshine Forest	<u>61</u>	Selmburg, Selmburg Teleport Gate Plaza
<u>22</u>	Coral Village, Coral Teleport Gate Plaza, Large Lake Outside of Village	<u>65</u>	Old Castle Labyrinth
<u>24</u>	Panareze, Panareze Teleport Gate Plaza	<u>66</u>	Old Castle Labyrinth
<u>25</u>	Giltstein, Giltstein Teleport Gate Plaza	<u>72</u>	Ozmalt, Ozmalt Teleport Gate Plaza, Agarla Village
<u>27</u>	Ronbaru Town, Ronbaru Teleport Gate	<u>74</u>	Kamdet, Kamdet Teleport Gate Plaza
<u>28</u>	Wolf Plains	<u>75</u>	Collinia, Collinia Teleport Gate Plaza
<u>35</u>	Forest of Wandering, Mishe, Mishe Teleport Gate	<u>100</u>	Ruby Palace

Getting Started

- 1) Select your class and which archetype for that class.
- 2) Start at level 1 (unless DM says otherwise). You get 10 in every stat (STR, DEX, etc.) and no points in any of the skill stats to start.
- 3) You start with 50 Cor.
- 4) Select your starting Sword Skill.
- 5) You start with your basic version of your weapon level 1.

Insight

Insight checks can be difficult to justify in a game with actual video game NPC's that have pre-determined responses, etc. To give the skill a bit more viability insight should also be used to determine a guestimate of another player's level. This can be done by a player noticing some rare gear, their facial expressions, or even their attitude or however the AK would like to justify it. This allows players inside the game to correctly assess the threat that another player might represent should they have to end up fighting that character.

Cooking

Cooking can make a huge difference in SAO and though it was only touched upon vaguely within the light novels and show I felt it could be more important. The cooking skill allows you to trade in materials you have collected in order to create a meal for your party. This meal can be prepared and eaten once per long rest and provides the party with temporary health points. The amount of which is determined by both the quality of the materials used and the skill of the chef. Unlike other skills <<Cooking>> difficulty depends on the Material used and that material sets the DC. To determine if <<Cooking>> is a fail or a success roll $1d20 + \text{<<Cooking>>}$. The DC for a <<Cooking>> check is $10 + \text{Material DC}$. The temporary health gained is the $\text{Material DC} + \text{Character level (of the Chef)}$.

Cooking DC Chart

<u>Material Used</u>	<u>Material DC</u>	<u>Temporary Health</u>
Common (C)	+5	5+Level
Uncommon (B)	+10	10+Level
Rare (A)	+15	15+Level
Legendary (S)	+20	20+Level

Sword Skills

Sword skills are a crucial part of “Sword Art Online” and replace the use of magic that is so prevalent in most other games. Sword Skills for this conversion trigger whenever a player rolls a critical hit when making an attack. When a critical success is achieved on an enemy the player has the choice to activate one of their known sword skills. Players that choose a sword skill to learn become increasingly effective the more they use it as such your bread and butter sword skill will be much stronger than players who focus on trying multiple types of sword skills. It is also important to understand how sword skills work fundamentally.

A sword skill is activated when the <<Pre-Motion>> for a skill is performed. Once the correct <<Pre-Motion>> is performed the sword skill takes over “Driving” the body to perform the sword skills with inhuman speed and accuracy.

After a sword skill is performed a player enters the <<Post-Motion>> state where the user is vulnerable to counter attack. The higher the level of the sword skill used the longer <<Post-Motion>> effect lasts.

Lastly, after a sword skill is used the skill enters a <<Cooling>> period where the sword skill cannot be used. Other known sword skills can be used however.

In order to simulate the use of sword skills effectively this conversion uses what is called the <<Drive>> system. The only way in the conversion to perform a sword skill is to critically hit using the rolled number on the D20 and with no other modifiers other than expanded critical range. The <<Drive>> mechanic is outlined below:

<<Drive>>: As an action you enter your <<Pre-Motion>> state to perform a sword skill. Roll a D20 and using only your expanded critical range AND Sword skill level of the sword skill you want to use determine if you have critically succeeded (Level 4 Horizontal + Expanded Critical range of Champion= 15-20 to critically succeed on a <<Drive>>). If you manage to succeed you perform the sword skill that you wanted to use. For the sword skill assume you had rolled max damage on your initial damage die from your weapon. Rolling a Natural 20 on a <<Drive>> allows you to perform a follow up Sword skill so long as it is not the one originally used. This effect continues until either a non-Natural 20 is rolled or all of the player's sword skills are on cool down. Using a skill labeled as (<<Drive>> Only) causes the skill to go on cool down for a number of rounds equal to the level you used it at.

Leveling Up Sword Skills

When you begin the game you are given 2 Sword Skill Points <<S.S.P>> which are used to start your basic knowledge of sword skills. Each <<S.S.P>> lets you level up a sword skill by 1 until that skill's max level. You are given 2 <<S.S.P>> at level 5 and every 5 levels thereafter until level 20.

<<One Handed Sword Skills>>

Horizontal

Lv. 1: Double the damage on the die.

Lv. 2: Double the damage on the die. A single creature within 5ft of you also takes this damage amount.

Lv. 3: Double the damage on the die. All enemies within 5ft of you also take this damage amount. Does not affect air units.

Lv. 4: Double the damage on the die. All enemies within 10ft of you also take this damage amount. Does not affect air units.

Vertical

Lv. 1: Double the damage on the die.

Lv. 2: Double the damage on the initial die and add an extra damage die.

Final Note

I hope you enjoyed the conversion and the hard work that I have put into it. I know that not all will agree with the efforts that I have put into it and that some things could be done different and so on. That said remember that this is a guide and I welcome other DM's/AK's to edit what they think is best for their party. On that note if you do choose to run a game please tell me success stories and let me know just how much your party is enjoying everything. I may in the future make updates to this conversion for quality of life or adjusting things on a per case basis, if you notice anything that seems off or game breaking feel free to email me.

My content will always be free for various reasons, however if you enjoyed the content and wish to help me out with creating more content you can always donate to the cause. If you would like to donate just go to “paypal.me/Cableguy5eContent”, all donations go to helping me further create free content to the masses.

If you have any feedback or comments you can reach me one of the various ways.
